Rates volatility and the Fed

Key takeaways

- The Nov FOMC saw a dissonance between slower Fed expectations and Powell's Q&A focus on the potential for a higher terminal
- The vol market seems to be overweighting the slower pace vs. the higher terminal potential in the recent price action
- We favor using fair left side vol levels & cheap pay/rec skew to hedge the tail risk of a Fed convergence to the Taylor Rule

By Bruno Braizinha

BofA GLOBAL RESEARCH

Rates volatility and the Fed

The Nov FOMC meeting saw a dissonance between expectations for a slower policy trajectory (supported by the statement) and Chair Powell's Q&A focus on the potential for a higher terminal. The vol market seems to be overweighting the slower pace vs. the higher terminal potential in the recent price action (lower vol led by the left side of the grid and gamma, along with the richening of receiver vs. payer skew on the left side).

This dynamic may be supported by a terminal pricing that exhausts the levels consistent with the current framework where the Fed targets real policy rates near-term (c.5-5.5% for the terminal), and reluctance from the market to price a further shift by the Fed towards Taylor Rule type levels. In this context, risks may look more balanced around c.5.25% terminal rates, receivers may find some support vs. payers' skew, and the market may start to overweight Fed slowdown signs vs. the potential for a higher terminal.

The left side of the vol grid is back around fair levels, but the right side is still slightly rich, suggesting the market may be pricing a more persistent buildup of term premium and inflation risk premium in rates. Rather than fading the right side vol richness, we favor using fair left side levels and cheap pay/rec skew to hedge tail risks.

Trading ideas and investment strategies discussed herein may give rise to significant risk and are not suitable for all investors. Investors should have experience in relevant markets and the financial resources to absorb any losses arising from applying these ideas or strategies.

BofA Securities does and seeks to do business with issuers covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

BofA GLOBAL RESEARCH

Rates volatility and the Fed

The November FOMC meeting saw some dissonance between: (1) the pre-blackout communications, which suggested scope for a soft Fed pivot (see [Postcard from Europe](#)); (2) the statement which supported expectations for a more gradual Fed by emphasizing the lags between policy tightening and the full impact of tighter policy in the economy (economic models' response functions generally put the full impact at c.1y horizon); and (3) a hawkish Q&A where the Fed Chair favored emphasizing the potential for a higher terminal, even as he validated expectations for a slower trajectory ahead.

The c.30bp round trip at the frontend of the yield curve between the statement release (10bp rally) and the end of Q&A (20bp sell-off from the lows to the highest 2yT yields since 2007) illustrates the degree of this dissonance. As the rates volatility market netted out the meeting, however, it seemed to have assigned a higher degree of significance to the softer policy trajectory. The left side of the volatility grid and the gamma sector led the underperformance in the week (Exhibit 1), while receivers continued to richen versus payers' skew on the left side of the grid (Exhibit 2).

We see two potential drivers for overweighting the slower policy pace vs. the potential for a higher terminal in the recent priced action, the first more technical and the second more fundamental:

1. Positioning is likely to have played a role. The short bias at the frontend has been consensual, and expressed both outright and conditionally. Despite a rather hawkish meeting, indications of a slowdown of the policy trajectory may have driven some profit-taking on these positions.
2. Over the last couple of quarters we have seen the Fed shifting from a rather orthodox view of policy tightening that looks at the nominal neutral rate (2.5% using the Fed's median of the longer run dots as a proxy for the neutral) as the level that separates easy from restrictive territory (and is consistent with terminal rates up to c.3.75-4%) towards targeting positive real policy rates near-term (where the terminal rate > average near-term inflation plus r^*). In this shift, the Fed injected a significant amount of volatility into the market, as an exceptional 75bp move in June turned into four such moves. It was also in this context that frontend real yields pushed quickly into positive territory, up c.200bp over the summer.

There is a range of values that is consistent with this real policy rate targeting framework, which we see around c.5%, perhaps up to 5.5%. When the Fed argues for a higher terminal, it does not necessarily mean a deviation from this framework (it may just mean realizing the forwards). There is scope, however, in a context where both inflation and labor market data continue to run hot, for a new policy shift towards higher Taylor rule levels (in the mid-7% range or above - Exhibit 3), which the Fed Chair actually referred to in the November meeting.

Notably, for the market to price a new shift towards a higher Fed regime, data may need to surprise more significantly on the upside, instead of trending sideways around the recent highs as it has been doing recently.

The current market pricing for the terminal may therefore be exhausting levels that are consistent with the current framework, while at the same time there may be some reluctance to price a new shift in framework by the Fed. It is in this context that risks may start to look more balanced around c.5.25% terminal rates (Exhibit 1), receiver skew may find some support vs. payer skew, and the market may start to overweight signs of a slowdown vs. the potential for a higher terminal.

Exhibit 3: Taylor rule scenarios contingent on Core PCE and U3

Green = range of scenarios covered by current fed funds level (3.75-4%)

BofA GLOBAL RESEARCH

Where do we go from here

The latter has the potential to bring about a more significant shift in the vol market dynamic. However, we are not seeing the soft pivot that the market was fixated on before the November FOMC meeting, but likely only a more gradual shift in view where even as the Fed reaches higher, it may do so by injecting less volatility into the market.

As we have been arguing (see [Vol and mixed signals](#)), a context where the market continues to price the full Fed pivot at a rolling 6m horizon (see Exhibit 7) implies fair value for 1y10y implied volatility near-term c.100-110bp, and c.135-140bp for 1y1y vol. We are back around fair levels on the left side, but still slightly higher on the right side of the grid, suggesting that the market may be pricing a more persistent buildup of term premium and inflation risk premium in rates and a re-set of ranges at the backend (see [Postcard from Europe](#) and the medium-term policy trajectory in Exhibit 4).

Exhibit 5: Decomposition of the 10yT dynamic as a function of monetary policy, demand, inflation and risk shocks shows risk component lagging in the recent sell-off

Steady state for 10yT over the last decade around 2%, recent sell-off may indicate a reset higher of the steady state towards levels around 2.5-2.75% or slightly above

Source: BofA Global Research

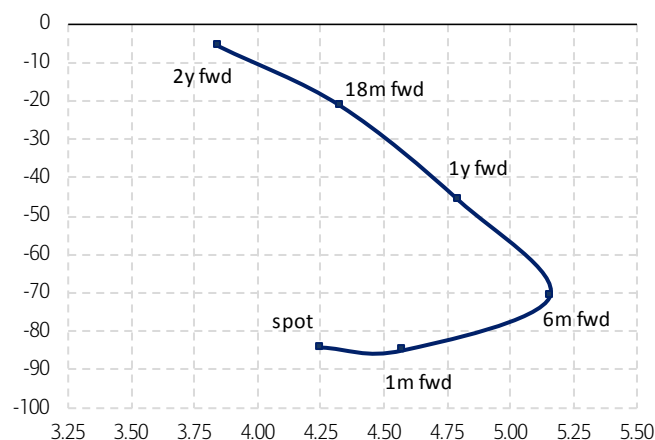

BofA GLOBAL RESEARCH

The next leg of volatility normalization is likely to come only as the market starts to price the full Fed pivot with more conviction (inside a 3m horizon - Exhibit 7). At that point, selling volatility becomes more compelling structurally. For now, however, we advise against fading the right side richness as we believe volatility may stay supported by: (1) positive correlations between risky assets and bond yields driven by the fact that the discounting component of equity valuations has superseded by far earnings expectations as the dominant driver of the recent dynamic of equities; and (2) the breakdown of the utility of USTs (and duration more broadly) for portfolios across its three most fundamental drivers (a liquid reserve of value, a diversifier for portfolios and a hedge for risk - see [Treasuries' existential crisis](#)). These create scope for more frequent episodes where the broader market dynamic becomes highly negatively convex (see [A negatively convex market](#)) and drives significant spikes in volatility.

Instead, we prefer using fair left side vol levels and some of the richness of receiver vs. payer skew there to position for tail scenarios where the Fed may need to reach higher towards Taylor rule type levels (e.g. through payer spreads financed with receivers with expiries around 3m, or payer spreads outright for those who wish to avoid building negative P&L profiles on positions).

BofA GLOBAL RESEARCH

Bottom line: The November FOMC meeting saw a dissonance between expectations for a slower Fed policy trajectory and Chair Powell's Q&A focus on the potential for a higher terminal. The volatility market seems to be overweighting the slower policy pace vs. the potential for a higher terminal in the recent price action (vol lower in the week led by the left side and gamma, along with the richening of receiver vs. payer skew on the left). Left side vol is back around fair levels, but the right side of the grid is still slightly rich suggesting the market may be pricing a more persistent buildup of term premium and inflation risk premium in rates. Rather than fading the right side vol richness, we favor using fair left side vol levels and cheap pay/rec skew to hedge tail risks.

To the extent this material discusses any legal proceeding or issues, it has not been prepared as nor is it intended to express any legal conclusion, opinion or advice. Investors should consult their own legal advisers as to issues of law relating to the subject matter of this material. BofA Global Research personnel's knowledge of legal proceedings in which any BofA Securities entity and/or its directors, officers and employees may be plaintiffs, defendants, co-defendants or co-plaintiffs with or involving issuers mentioned in this material is based on public information. Facts and views presented in this material that relate to any such proceedings have not been reviewed by, discussed with, and may not reflect information known to, professionals in other business areas of BofA Securities in connection with the legal proceedings or matters relevant to such proceedings.

This information has been prepared independently of any issuer of securities mentioned herein and not in connection with any proposed offering of securities or as agent of any issuer of any securities. None of BofAS or any of its affiliates or their research analysts has any authority whatsoever to make any representation or warranty on behalf of the issuer(s). BofA Global Research policy prohibits research personnel from disclosing a recommendation, investment rating, or investment thesis for review by an issuer prior to the publication of a research report containing such rating, recommendation or investment thesis.

Any information relating to the tax status of financial instruments discussed herein is not intended to provide tax advice or to be used by anyone to provide tax advice. Investors are urged to seek tax advice based on their particular circumstances from an independent tax professional.

The information herein (other than disclosure information relating to BofA Securities and its affiliates) was obtained from various sources and we do not guarantee its accuracy. This information may contain links to third-party websites. BofA Securities is not responsible for the content of any third-party website or any linked content contained in a third-party website. Content contained on such third-party websites is not part of this information and is not incorporated by reference. The inclusion of a link does not imply any endorsement by or any affiliation with BofA Securities. Access to any third-party website is at your own risk, and you should always review the terms and privacy policies at third-party websites before submitting any personal information to them. BofA Securities is not responsible for such terms and privacy policies and expressly disclaims any liability for them.

All opinions, projections and estimates constitute the judgment of the author as of the date of publication and are subject to change without notice. Prices also are subject to change without notice. BofA Securities is under no obligation to update this information and BofA Securities ability to publish information on the subject issuer(s) in the future is subject to applicable quiet periods. You should therefore assume that BofA Securities will not update any fact, circumstance or opinion contained herein.

Certain outstanding reports or investment opinions relating to securities, financial instruments and/or issuers may no longer be current. Always refer to the most recent research report relating to an issuer prior to making an investment decision.

In some cases, an issuer may be classified as Restricted or may be Under Review or Extended Review. In each case, investors should consider any investment opinion relating to such issuer (or its security and/or financial instruments) to be suspended or withdrawn and should not rely on the analyses and investment opinion(s) pertaining to such issuer (or its securities and/or financial instruments) nor should the analyses or opinion(s) be considered a solicitation of any kind. Sales persons and financial advisors affiliated with BofAS or any of its affiliates may not solicit purchases of securities or financial instruments that are Restricted or Under Review and may only solicit securities under Extended Review in accordance with firm policies.

Neither BofA Securities nor any officer or employee of BofA Securities accepts any liability whatsoever for any direct, indirect or consequential damages or losses arising from any use of this

information.
